Personal Experience with Coursera

Experience: It was wonderful experience with coursera as it provides us a platform to gain knowledge of our domain, not only our domain we can easily learn anything we want and also our college has provided free access to it that ultimately helps us to achieve some knowledge and and it actually helped. Also the help community of coursera was very helpful in case of getting problem regarding any course.

New learnings: I have learned that one can easily learn new things if we are fully deterministic and devoted to what we want even after attempting so many attempts because some limited attempts are there for each quiz in coursera. A new skill set with certifications.

Skill set developed: Container Orchestration, Software Management
